

“EB” Pro Cellular Cleanse Therapy

Detoxification: Protecting your body’s health from the inside out

Every day your body is under constant assault from an endless array of toxic encounters such as air pollution, fertilizers, contaminated water, growth hormones present in many foods, antibiotics, and food additives. While your body has certain cleansing abilities, it can’t keep up. The body’s ability to cleanse itself internally simply becomes overloaded and toxic residues build up. As a result, the body’s cells can’t work at peak efficiency, setting off a domino effect for physical ailments and potential health problems that can include: allergies, arthritis, immune deficiencies, migraines, cancer, heart disease, circulatory problems, and memory impairments. Now there are steps to help cleanse harmful toxins from the inside of your body. It’s called the “EB” Cellular Cleanse Therapy.

How it Works

The “EB” Cellular Cleanse Therapy is based on bioenergetics technology, creating an energy field similar to the energy produced by the human body. This field stimulates cellular energy and enhances the body’s ability to internally cleanse itself naturally, at an increased rate, restoring and normalizing the body’s correct pH balance and energy levels.

The principal is similar to how a magnet works. Except in this case, the magnetic force functions to help cancel out and eliminate harmful free radicals and other toxins from the body. The “EB” Cellular Cleanse Therapy uses a saline solution (water & salt) in a foot bath as a conduit for exchanging ions. The energy field created within the body draws negative and positive ions together, helping negate their harmful effect while gently stimulating cellular cleansing.

Bioenergetics is important because the amount of energy within a person at the cellular level and their residual balance of energy have a direct correlation with the body’s ability to problem solve, perform all types of work, and remove waste. In terms of bio-electricity, the cells of a healthy human organism have a negative potential of between 70 and 90 millivolts. Within the range of potential, nutritional absorption and the discharge of toxic waste are efficient. Stressed or injured cells on the other hand, can measure as little as 10 to 20 millivolts, resulting in both poor nutritional absorption and discharge of toxic waste. Such a condition can occur suddenly as a result of an accident or develop slowly due to the effects of modern diets, stressed life-styles, and the impact of a toxic environment.

The “EB” Cellular Cleanse Therapy uses direct micro-current, generating ions at a higher range providing energy that is sub-threshold, and very similar to low voltage electro-stimulation or cold laser, both of which have been proven to increase and create more storable cellular energy. This increase allows the cells to work and purge

at a higher rate and to withstand external stressors that can be either physical or chemical.

Expected Results

As the cells purge their toxins, you will see the results in the foot bath solution. Variations in the color of the foot bath solution occur due to each individual's energy state and toxicity levels as the toxins in the body are re-ionized at the molecular level and react with the metals of the array. Studies have shown a correlation between the color of the water/floating particles and the material of the body being detoxified. An analysis of the water color and floating particles are offered at the time of treatment.

It is important to note that some discoloration of the water along with black flecks and turquoise flecks are attributable to regional water variations and corrosion of the array.

Frequency of Treatment

For optimal detoxification, the recommended frequency is every other day for individuals between the ages of 10 and 65; every third day for individuals over 65. The average session time is between 18 and 23 minutes.

1 - 12 minute session: \$25

1 - 18 minute session: \$35

1 - 23 minute session: \$45

Multiple session discount available
